

COMMANDER'S INTENT

*Know the outcome.
Stay within the boundaries.
Choose your own method.*

BOUNDARIES

- **Observation** – Were observations effective in keeping the drive safe?
- **Control** – Was the vehicle controlled appropriately?
- **Accuracy** – Was the intended outcome achieved?

WHAT'S STOPPING THE LEARNER FROM SUCCEEDING RIGHT NOW?

Look for the cause, not the symptom!

• Knowledge & Understanding (GDE 2)

Do they know what to do, understand why, and how they fit into the road system? Or are their beliefs influencing what they do?

Common beliefs

- “I should be doing the speed limit.”
- “Everyone else drives this fast.”
- “I’ll hold people up if I slow down.”

• Skill (GDE 1)

Can they reliably perform the task?

• Thoughts & Feelings (GDE 3 & 4)

Are confidence, anxiety or emotions affecting performance?

• Workload (Capacity vs Demand)

Is the demand exceeding their current capacity?

Why focusing on mistakes can make things worse

The more you focus on the last mistake (what’s already happened), the harder it becomes to focus on what you need to do next (what’s happening right now).

Focusing on mistakes increases stress and workload, making it harder to concentrate, plan ahead and make good decisions.

Driving safely happens in the present. Your attention should too!
